## CS 164: Fall 1999 <br> Midterm Solutions <br> Professor L. Rowe

## PROBLEM 1.

Answer the following TRUE/FALSE questions:
All non-deterministic finite state automatons can be converted to a deterministic finite state automaton: TRUE
An object-oriented program is easier to read and understand than a conventional procedural program: TRUE
The class of the value assigned to the this variable in a method is the class within which the method is declared: FALSE
A Java method signature does not include the return type: TRUE
A transient instance variable in Java is not written to persistent storage if the object is output: TRUE
The class of the Class object is Class: TRUE
A regular expression can specify the set $\mathrm{a}^{\mathrm{n}} \mathrm{b}^{\mathrm{n}}$ where $0<\mathrm{n}<5$, that is $\{\mathrm{ab}, \mathrm{aabb}, \ldots$, aaaabbbb\}: TRUE
A shift reduce parser performs reductions in the reverse order specified by a left-most derivation: FALSE
The string aabb is a sentential form for the grammar $\mathrm{S}->\mathrm{ab} \mid \mathrm{aSb}$ : TRUE A JO99 variable has an l-value and r-value: TRUE
An abstract syntax tree is derived from a parse tree by removing extraneous nodes and restructuring the tree: TRUE
A handle is a simple phrase: TRUE
Some JO99 objects do not have a class: FALSE
The following finite state automation recognizes the laguage specified by the regular expression $\mathrm{a}^{*} 1 \mathrm{a}^{+}$: FALSE

| State | Input | NextState |
| :--- | :---: | :---: |
| 0 | 1 | 1 |
| 0 | $a$ | 0 |
| 1 | $a$ | 2 |
| 2 | 1 | 1 |
| 2 | a | 2 |
| Staring | state is 0 |  |

A context free grammar can be used to recongnize any context sensitive language: FALSE

## PROBLEM 2.

Given the parse table and grammar:

|  | b | a | \$ | S | A |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | s3 | s2 |  | 1 | 5 |
| 1 |  |  | accept |  |  |
| 2 | r4 | s2 | r4 |  | 4 |
| 3 |  |  | r1 |  |  |
| 4 | r3 |  | r3 |  |  |
| 5 | s6 |  |  |  |  |
| 6 |  | s2 |  |  | 7 |
| 7 |  |  | r2 |  |  |

r1: S->b
r2: S->AbA
r3: A->aA
r4: A->a
a) Show a right-most derivation for the input aaba.

S->AbA->Aba->aAba->aaba
b) When parsing the input aaba, how many shifts will be performed?

4
c) Show the parse tree for aaba.

## PROBLEM 3.

Given the grammar

S->AcD
A->ab|aAb
D->d|Dd
a) What is the language ?
$a^{n} b^{n} c d^{m}$
$\mathrm{n}, \mathrm{m}>=1$
b) Fill-in the following sets:

FIRST(s) $=\{\mathrm{a}\}$
$\operatorname{FIRST}\{\mathrm{A}\}=\{\mathrm{a}\}$
$\operatorname{FIRST}\{D\}=\{d\}$
c) Fill-in the following sets:
$\operatorname{FOLLOW}(\mathrm{S})=\{\$\}$
FOLLOW $\{\mathrm{A}\}=\{\mathrm{c}, \mathrm{b}\}$
FOLLOW $\{\mathrm{D}\}=\{\mathrm{d}, \$\}$
d) Given the item set I :

S'->.S\$
S->.AcD
A->.ab
A->.aAb
which is CLOSURE ( $\left\{\mathrm{S}^{\prime}->. \mathrm{S} \$\right\}$ ) for the grammar above, how many edges will exit this state in the canonical LR (0) collection?

3 exit edges
e) Given the item set I in part d, what items are in GOTO (I, a)?

A->a.b
A->a.Ab
A->.ab
A->.aAb

## PROBLEM 4.

Given the following transition table:

| State | Input | NextState |
| :--- | :---: | :---: |
| 0 | S | 1 |
| 0 | a | 3 |
| 0 | b | 2 |
| 3 | a | 3 |
| 3 | A | 4 |
| 3 | b | 2 |
| 3 | S | 5 |

| 4 | a | 3 |  |
| :--- | :--- | :--- | :--- |
| 4 | S | 7 |  |
| 4 | C | 6 |  |
| Starting | state | is | 0 |

a) What are the dimensions in the ACTION table (i.e number of rows and number if columns)?

8 rows
4 columns (a, b, c, \$)
b) How many shift entries?

7
c) List the column headers in the GOTO table.

S, A
d) What entries might appear in ACTION tanle rows for states with no exiting edges?
reduce
accept
error (i.e. blank)
