### E7: Introduction to Computer Programming for Scientists and Engineers

### **Course Objectives**

E7 is an introductory course on computer programming for lower-division students in science and engineering. The principal goal of the course is to introduce basic computer programming concepts and apply them to computer-based problem-solving methods. The course stresses hands-on computer programming using MATLAB, a powerful high-level programming environment.

#### **Course Format**

E7 consists of classroom lectures, computer laboratory sections, and classroom discussions. Faculty instructor delivers lectures and discussions, while student instructors (GSIs) supervise laboratory sections.

Lectures will begin on Monday, June 4 and held Mondays and Wednesdays in 180 Tan, from 9:40 to 11:00 am. Discussions will begin on Friday, June 8, and be held Fridays in 10 Jacobs from 11:10 am to 12 noon. The discussions will present and discuss the upcoming homework/laboratory assignments and answer questions.

Laboratory sections will begin on the second week of instruction, starting Tuesday, June 12 in 10 Jacobs. Labs will be held on Tuesdays and Thursdays between 9:10 am to 12 noon.

#### **Course Website**

The course website is hosted at <a href="https://bcourses.berkeley.edu/">https://bcourses.berkeley.edu/</a>. All material, schedules, homework, and communication regarding the course will be handled through this website. Your bCourses account will also give you secure access to your grades and you will be able to communicate with the faculty, GSIs, and your classmates. You are strongly encouraged to post technical questions on bcourses, as opposed to communicating them by private email. It is your responsibility to check the E7 bCourses site frequently, as important information about the course will be routinely posted on bCourses.

# **Teaching Staff**

Instructor: Sushrut Pande (sushrutpande@berkeley.edu)

GSI: Magda Ntetsika (<u>ntetsika@berkeley.edu</u>)

GSI: Tongge Wu (wutongge@berkeley.edu)

Logistical matters pertaining to the course should be addressed to GSIs or myself.

### **Course Text and Programming Language**

#### There is no required textbook for the course.

We highly recommend you obtain <u>the latest release of the Student Version of MATLAB</u>, which can be obtained (free) via UC Berkeley's Software which can be accessed through software.berkeley.edu. The Matlab software comes with extensive built-in help. Additional help and tutorials can be found on the <u>Mathworks website</u>. Among other things, this website contains <u>documentation</u>, including manuals that you can download for free. In addition to the Matlab documentation, we will post handouts on bCourses.

# **Assignments**

There will be 8 assignments in the course. All assignments must be turned in no later than 11:59 pm on the day they are due. Assignments will generally be assigned on Thursday nights, and due the following Thursday nights - however there may be some exceptions to the above. Assignments are meant to be worked on both outside of class and during laboratory sections. Here are some important guidelines:

- (i) The procedure for working on your assignments will be explained during the Discussion Session on Friday, June 8. Weekly laboratory assignments will be available for download (generally on Thursday nights) in the form of a PDF file. You need to upload a .zip file containing all the m files to bCourses no later than 11:59 pm on the day each assignment is due. Name your zipped file lastname\_firstname\_hw1 for the first homework, etc. You can upload this file multiple times until the deadline and only your last uploaded file will be preserved. Further details will be provided in each assignment.
- (ii) Owing to the size of the class, late assignments will not be accepted under any circumstances.
- (iii) It is acceptable to discuss with your classmates the material contained in the assignments. However, we require that you complete all assignments on your own. Copying someone else's work or allowing your work to be copied constitutes cheating, and will result in at least zero credit for the entire assignment, as well as possible disciplinary action (see the Academic Honesty section below).

#### Midterms and Final

There will be two 80-minute midterm examinations during the Friday discussion times, scheduled for 29 June and 20 July. Also, there will be a 3-hour final examination on Wednesday, August 8 between 9.30 am to 12.30 pm. You will be required to provide your student ID before entering the examination room. It is your responsibility to let me know in case of any final Exam conflicts well in advance of the exam date.

### **Academic Honesty**

The student community at UC Berkeley has adopted the following Honor Code: "As a member of the UC Berkeley community, I act with honesty, integrity, and respect for others." Your E7 instructors join you in pledging to adhere to this code.

Please note that copying programming code constitutes cheating and we may deploy software that will detect when code has been copied. Cheating will result in a 0 on the assignment and a possible report submitted to The Center for Student Conduct.

For further details, see the Berkeley Campus Code of Student Conduct at: <a href="http://sa.berkeley.edu/student-code-of-conduct">http://sa.berkeley.edu/student-code-of-conduct</a>.

# **Grades and Grading**

The course grade will be assigned based on the following percentages:

30 % Homework Assignments

20 % Midterm 1

20 % Midterm 2

30 % Final

If you find any discrepancies between the issued grades and the grades posted on bCourses, please bring them to the attention of the instructor or one of the GSIs immediately.

# **Re-grading**

If you believe that a problem (of Assignment or Midterm) was graded incorrectly, write a short paragraph outlining your case and submit it into a REGRADE folder on bCourses. You have **one week** from the time you receive your Assignment or Midterm back to submit the regrade request.
